

# HONING POWDERS

GRITS: 150 | 400 | 800 | 1200

Modern Stone's Honing Powders are specifically designed to bring back an even look to most types of marble, travertine and limestone. Their non-acidic formula is made with the highest purity available to remove scratches and heavy wear. Excellent for use on uneven surfaces where diamonds are not an option.

## USES

For the restoration of most types of marble, travertine & limestone. Results will vary based upon the density of the stone and level of polish required. Always test in a small inconspicuous area to determine ease of application and desired results.

## COVERAGE

Approximately 600 to 1,000 sq. ft. per pound.

## APPLICATION

1. Mask off baseboards, appliances and other surfaces to protect from splash of slurry mixture.
2. Apply honing powder of desired grit to surface with a small amount of water (1 cup) to create a slurry.
3. Begin restoration using a weighted (130-140 pounds) 175 rpm floor machine or angled grinder/sander fitted with hogs hair or similar pad.
4. Add water and honing grit as needed to keep a sufficient level of slurry under the pad.
5. Hone floor until desired level of evenness is achieved. Extract slurry thoroughly after completion of each grit level with either a wet/dry vac or extraction machine with water.
6. Change pads with each change in powder grit level.
7. Rinse surface thoroughly after honing process is complete to remove slurry residue and excess compound.

### Handling & Storage:

Close container after each use. Store in original container only. Keep in a dry well-ventilated area.

### Caution:

Avoid prolonged dust inhalation. Use with adequate ventilation.
